

Zen Healthcare IT Achieves Third Full HITRUST r2 Certification

FOR IMMEDIATE RELEASE

Dallas, Texas - March 5th, 2026 - Zen Healthcare IT, a leader in healthcare interoperability solutions, has earned its third consecutive HITRUST r2 Certification, now aligned with the HITRUST CSF v11 framework.

This achievement demonstrates Zen Healthcare IT's ongoing commitment to the highest standards of information security and regulatory compliance. The transition to version 11 reflects Zen's commitment to making continuous improvements in our security posture and maturity.

What This Means for Zen Clients

Zen Healthcare IT's [HITRUST r2 Certification](#) provides independent validation that its platform and processes meet or exceed the most comprehensive and rigorous assessment frameworks in cybersecurity.

All Zen's clients and their downstream connections benefit from Zen's validated robust safeguards for data security and privacy. The HITRUST CSF r2 level certification assures healthcare organizations, technology vendors, payers, and providers that Zen's infrastructure is secure by design and aligned with evolving regulatory requirements.

Commitment to Secure Interoperability

As healthcare data exchange becomes a core requirement for all stakeholders in healthcare, the need for trusted, secure and scalable infrastructure is critical. Zen Healthcare IT's ongoing commitment to HITRUST r2 Certification demonstrates that security is embedded in every aspect of its platform and operations.

“HITRUST’s unique approach to cybersecurity assessments that “audits the auditor” brings a level of cybersecurity assurance that frankly all healthcare organizations should demand of their vendors. Due in large part to our multi-year commitment to maintaining the highest level r2 certification, Zen doesn’t treat HITRUST as simply a box to check, but as the way we run our business every day across all teams and departments. And the entire Zen team is extremely proud of this exceptional certification,” said James Benson, Chief Executive Officer of Zen Healthcare IT.

About Zen Healthcare IT

Zen Healthcare IT is an interoperability platform and services company enabling secure, scalable health data exchange across the healthcare ecosystem. Zen supports technology vendors, digital health companies, payers, HIEs, and providers by simplifying connections to national networks and bridging legacy and modern data standards.
